

GLASS FIBRE BANNER FLAGPOLE

In this model, the flagpole comes with no halyard.

The banner flagpole is provided with a fixed horizontal rotary arm, which keeps the flag always legible. The flagpole needs to be laid on the ground before the flag can be fitted or removed.

The price includes: flagpole, white flat ball finial, rotary head, jib (banner), weight, clamps (x5), mounting anchor.

The glass fibre flagpoles are made from a single component (tube), which is tapered towards the top. The flagpoles are installed in a concrete base using a mounting hinge. The hinge makes the installation easier and enables to lay the flagpole on the ground, e.g. during maintenance. A system of screws makes it possible to adjust the vertical position of the flagpole.

Our flagpoles are available in any RAL colour.
